Excavator Quick Hitches

Contatore Engineering's Quick-Hitch System was developed using our innovative wedge lock design, which fastens Excavator Buckets and attachments securely onto the Quick-Hitch. **This greatly reduces the wear factor normally associated with other types of Quick-Hitch Systems.**

The wedge is machined, giving a true mating fit to the Excavator pin. The wedge also incorporates stop blocks, that when locked into position by means of a **manual safety pin prevents the wedge from releasing the attachment in the event of machine failure or accidental release.**

Our Excavator Hydraulic Quick-Hitches are fitted with a lifting eye as standard, and are the **first choice for operators who want to efficiently swap out attachments.**

To Suit 5T to 65T Excavators

- Bisalloy construction
- Wedge lock arrangement
- Certified lifting lug
- Designed to Australian standards 1418.5
